Stanford, CA 94305-5235

June 8, 2009

To my colleagues,

I am very sorry to say that I will be leaving Stanford this summer and moving to Los Angeles. This means that I will close my clinic at Lucile Packard Children's Hospital (LPCH) at Stanford and I will open a new clinic at Children's Hospital of Los Angeles (CHLA). While I am looking forward to the opportunity to work with children in Los Angeles, I am also sad to be leaving my department and a great group of kids here at Stanford.

If any of your patients have appointments with me at Stanford after June 19, 2009, those appointments will be cancelled. I have sent a letter to all current patients with several options for follow-up, and I am attaching a copy of that letter for your information as well. If you would like to have me continue to see your patients, you will need to fax a consultation request to CHLA (attached). Note that patients will be "new" patients at CHLA and I can only see new patients who are 18 years or younger. In addition, CHLA requests that authorization for treatment be obtained prior to scheduling an appointment, and I am enclosing a copy of the authorization information letter that is being sent to patients.

The clinic number at CHLA is (323) 361-2471 and the fax number is (323) 361-1109. If you need to contact me personally, it will always be most efficient to reach me by email ([terry@sangerlab.net](mailto:terry@sangerlab.net)).

Thank you for your consultations over the past years, and for allowing me to help take care of this remarkable group of kids. As always, please feel free to call or email and I will help however I can.

Sincerely,

Terry Sanger, MD PhD

Associate Professor of Neurology and Neurological Sciences  
Stanford University

PS: Unfortunately, Sara will not be moving to LA with me, and she will not be continuing to work with the Child Neurology Department at Stanford. She has been a tremendous resource for me and the patients, and she will be missed by all of us.
